WHEAT

Fundamental Summary	Price Drivers	Impact	Weightage	Score (1-5)*
	Lower acreage of wheat reported till now, but sowing expected to pick and be atleast equal to last year	Consolidation	25%	3
	Hike in import duty from 10% to 20%	Bullish	20%	4
	Festive/wedding season demand amidst lean supply season	Bullish	30%	4
	Bumper wheat harvest in 2017	Bearish	10%	2
	Comfortable central stock position and sale by FCI	Bearish	15%	2
	Overall fundamental score			

* 1. Bearish; 2. Marginal Bearish; 3. Consolidation; 4. Marginal Bullish; 5. Bullish

- In the current rabi sowing season, India's wheat acreage till 1 December 2017 stands at 156.8 lakh hectares, 7.53% lower as compared to 169.57 lakh hectares sown last year till the same date.
- The government doubled the import duty on wheat from 10% to 20% to send a positive price signal to the farmers. In October, the government had also raised the wheat MSP by 6.8 percent to 1,735 rupees per quintal.
- The above measures taken may help in ensuring the wheat area to be atleast equal to last year even despite acreage progress being slow. Rainfall in October may ensure good yields too in the current season.
- As per FCI, an expected increase in wheat production and rising stockpiles would mean that India may not need to import wheat in 2018/19. In the fiscal year ending March 2017, India imported 5.75 mt of wheat. The imports for fiscal year ending March 2018 may touch 3 million tonnes despite record production, though doubling of import duty will reduce the flow of wheat shipments from the Black Sea region.
- Wheat stocks with government agencies stood at 23.9 million tonnes as on Nov. 1, up 27 percent from a year ago following record output in 2017. FCI is currently selling wheat through E-Auction at a reserve price of Rs. 1790 per quintal.
- As per fourth advance estimates of Government, India recorded a bumper crop of 98.38 million tonnes in 2016-17 against 92.2 million tonnes in 2015-16. For 2017-18, the government has set a target of 97.50 million tonnes.
- According to industry players, wheat stocks in the country by the end of 2017-18 have projected at a comfortable 12-13 million tonnes against less than 8 million tonnes a year ago.
- Pickup in demand from flour mills to meet ongoing festive/wedding season demand is adding support to wheat prices.
- India has committed to donate around 1.1 million tonnes of wheat to Afghanistan and is currently sending the instalments through Chabahar, from where they will be unloaded and transited to south-western Afghanistan.
- As per the latest USDA report, Global wheat output is estimated at 751.98 million tonnes against 754.15 million tonnes last year, while the ending stocks are projected higher at 267.53 million tonnes against 256.58 million tonnes last year. While Black sea region's production is significantly high, Australia's wheat production estimate is down 21.50 million tonnes against 33.5 million tonnes last year on unfavourable weather.
- The overall fundamental score of 3.25 shows mild bullishness in wheat prices in the ongoing lean supply season.

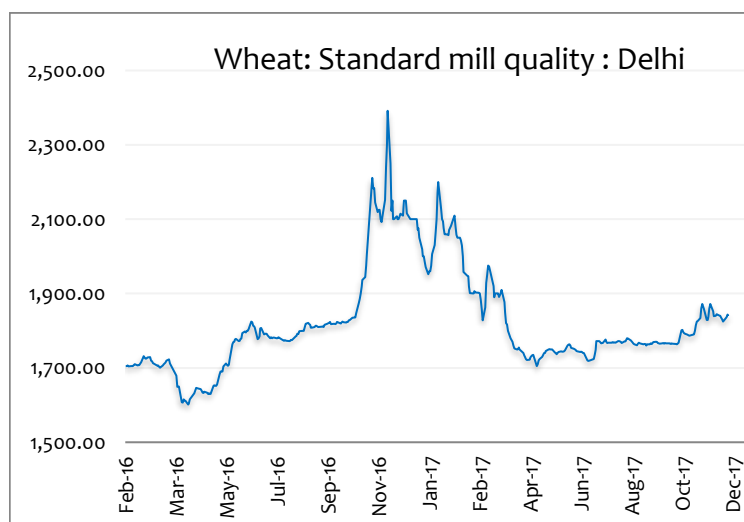

Mandi	Price in Rs/Quintal		
	1-12-2017	24-11-2017	%change
Delhi	1832.3	1824.5	0.43
Kota	1666.15	1677.8	-0.69
Kanpur	1655	1667.5	-0.75

Price Trend & Technicals

Though the fundamentals are pointing towards a mild recovery in the near term, the technical are not complimenting the fundamental sentiments. Technically the prices are bound to show some more consolidation at the current levels before some positivity can creep in on account of rise in import duty and festive demand. We expect the wheat prices to consolidate in the ongoing range of Rs 1830-1872 and move higher only on a decisive breach of either of the two levels. We expect next move to be on the higher side and a breach and close above Rs 1872 will result in extension of the rising streak towards Rs 1910.

IMPORTANT LEVELS

S2	S1	CMP	R1	R2
1810	1830	1,840	1910	1975
Outlook: Prices will trade with sideways undertone. Fresh strength will emerge beyond Rs 1872 for Rs 1910.				

Fundamentals- Domestic & International

PADDY

Fundamental Summary	Price Drivers	Impact	Weightage	Score (1-5)*
	Incoming arrivals of the new crop	Bearish	30%	2
	Lifting of import ban by Iran and high overseas demand	Bullish	20%	4
	Lower acreage in 2017-18 kharif and lower production estimate	Bullish	20%	4
	Fall in Basmati exports expected fro 1 Jan 2018 due EU norm	Bearish	10%	2
	High demand from stockists and low carryover for basmati	Bullish	20%	4
	Overall fundamental score			

*Bearish; 2. Marginal Bearish; 3. Consolidation; 4. Marginal Bullish; 5.Bullish

- Rice basmati prices are firm on stockists buying against restricted arrivals from growing regions. There was no carryover stock of basmati crop from last year and with this year's is crop less.
- The kharif area sown under rice for 2017-18 fell to 379.08 lakh hectares, 3.29% lower than 382.37 lakh hectares. While in the ongoing rabi sowing, the rice acreage is 10.56 lakh hectares till 1 Dec against 7.83 lakh hectares last year.
- Haryana has registered its all- time high paddy arrival of 70.24 lakh tonnes up to November 30 in the current season as against as against 69.56 lakh MT during the entire season last year.The state procurement agencies in Haryana have procured more than 58.96 lakh tonne of paddy up to November 30 against 53.47 lakh tonne last year.
- A great demand of India's Basmati was seen from Europe just before the new fungicide import norm comes into effect. The EU has given time to India till December 31 to meet the new norms to bring down the maximum residue limit (MRL) level for Tricyclazole (a fungicide) 0.01 mg. Due to this, Basmati exports may decline as much as 5% to 3.79 million metric tons in the year than began on April 1 from a year earlier.
- Iran government has lifted the the temporary ban on rice imports from Nov. 22 up until July 22, 2018. Due to fresh demand from major countries like Bangladesh, Iran, Sri Lanka, rice prices have firmed up.
- MY 2016/17 total rice exports from India are estimated at 11.80 mn tonnes (4 mn tonnes Basmati) against 11 mn tonnes last year.
- As per first advance estimates released by government, India's kharif rice output 2017-18 is likely to fall by 1.9 million tonnes to 94.48 million tonnes from the record 96.39 million tonnes kharif production in 2016-17.
- As per FCI, paddy procurement as on 28th Nov for KMS2017/18 reached to 172.98 lakh tons, up 4.24% from corresponding period last year. India's rice stocks in the central pool as on 1 Nov 2017 stood at around 27.19 million tons down by 12.85% during the corresponding period last year.
- As per the November USDA report, global rice production is pegged at 481.20 million tonnes against 487.13 million tonnes last year. First Ten-month rice exports of Vietnam the world's third-largest shipper of the grain were forecast to rise 21.6 percent to 5 million tons.
- Overall fundamental score of 3.2 shows mild bullishness to consolidation in prices which may be pressured after few days with paced arrivals.

Mandi	Paddy : Price in Rs/ Quintal		
	01-12-2017	24-11-2017	%change
Hanumangarh (1121 Pusa)	3350	3175	5.51
Kanpur (Common)	1580	1587	-0.44
Amritsar (Attari)	3231	3250	-0.58

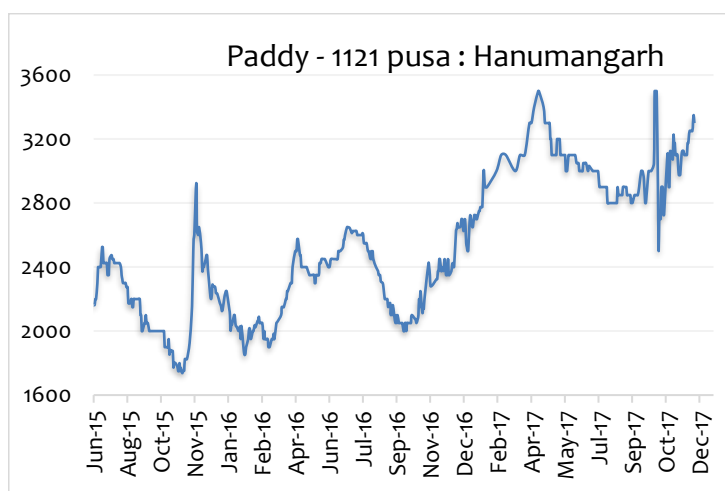

Price Trend & Technicals

Lower acreage numbers which are pointing towards a lower production scenario coupled with high overseas demand are favouring upmove in the paddy prices for the near term. However the surge is not sharp due to the incoming arrivals of the new crop. Overall for the very short term the positivity in the prices would continue to lift the sentiments pushing prices closer to Rs 3500. Strong resistance zone is seen around those levels which might contain any further price rise. Chances of any significant downside are limited and positivity will continue in the coming weeks.

IMPORTANT LEVELS

S2	S1	CMP	R1	R2
3100	3225	3300	3500	3580

Outlook: Prices will trade with positive bias towards Rs 3500.

Fundamentals- Domestic & International

TUR

Fundamental Summary	Price Drivers	Impact	Weightage	Score (1-5)*
	Importers booked tur in Myanmar for the lean season	Consolidation	10%	3
	Good pace of harvesting of new crop	Bearish	40%	2
	Procurement activity may start in coming days	Bullish	25%	4
	Opening of exports	Bullish	15%	4
	Lower production estimate	Bullish	10%	4
	Overall fundamental score			

*Bearish; 2. Marginal Bearish; 3. Consolidation; 4. Marginal Bullish; 5. Bullish

- In expectation that government may open up imports in lean season, corporate buyers had booked 3-4 lakh tonnes of tur in Myanmar. They are planning to store their inventory in Myanmar till the Indian government lift restriction on imports.
- Government has restricted import quantity of tur up to 2 Lakh MT in 2017-18. As of 18th November, Burma lemon tur is being offered at Rs 3500 per quintal in Mumbai market.
- New tur crop started arriving in small quantities in few districts of Maharashtra. New crop quality is good. However, moisture level is high. Harvesting activities in the coming days will take place in full swing as weather condition is favourable. New crop arrival may put downward pressure to the domestic market.
- Procurement activities may start in the coming days which might push the market upward. MSP of tur is Rs 5450 per quintal.
- As per trade sources, central government is changing its policy of buying pulses from the farmers. Now states will be buying pulses according to their own requirement and central government may give subsidy to the state government.
- Maharashtra government has decided to process 2.5 Lakh MT of tur and sell it to the public at Rs 55 per Kg through public distribution system. Processed tur will be available in 1 Kg and 5 Kg bags. The decision will help in clearing old stocks of tur with the government.
- As per latest government notification, export ban on all types of pulses has been removed. This step was taken to ensure that farmers may have greater choice in marketing their produce and can get higher prices for their product.
- India's tur production for 2017-18 is estimated at 3.99 million metric tonnes which is 6.11 per cent lower than the target estimate of 4.25 million metric tonnes of 2017-18.
- Overall score of 3.1 shows range bound to slightly bullish movement in the coming days.

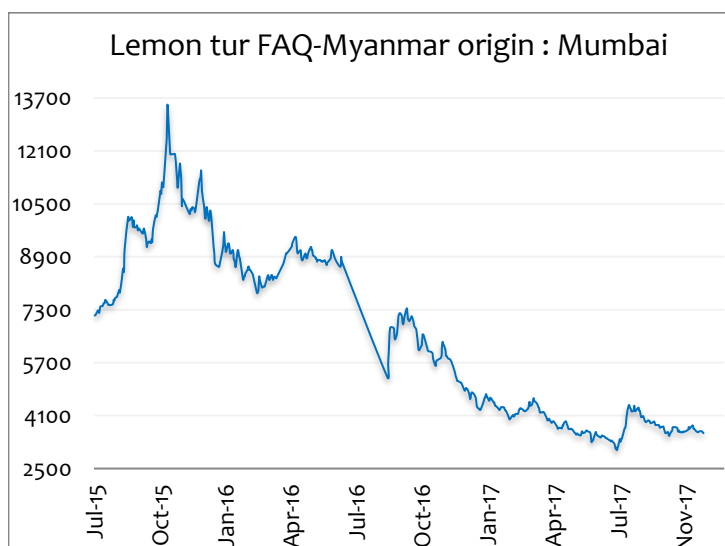

Mandi	Price in Rs/ Quintal		
	01-12-2017	24-11-2017	%change
Mumbai	3550	3625	-2.07
Kanpur	3650	3650	0.00
Akola	3640	3700	-1.62

Price Trend & Technicals

With harvesting and arrivals picking up pace the immediate undertone continued to be sluggish in tur prices. However with removal of restrictions on exports of pulses may improve the sentiments and underpin the prices which are trading under supply pressure. Prices will expectedly move closer to the support which at Rs 3501. In prices manage to breach and trade below it for sufficient time we might see a further stretch of the declining streak towards the next and important support mark of Rs 3440. However, if the support of Rs 3501 is honoured, fundamental support can induce recovery towards Rs 3610 and then Rs 3730.

IMPORTANT LEVELS

S2	S1	CMP	R1	R2
3440	3501	3550	3610	3730
Outlook: Prices may trade with sideways to downward bias towards 3501 from where recovery will be seen.				

Fundamentals- Domestic & International

CHANA

Fundamental Summary	Price Drivers	Impact	Weightage	Score (1-5)*
	Expectation of import duty on chana	Bullish	20%	4
	Regular imports	Bearish	15%	2
	Higher sowing coverage acreage	Bearish	15%	2
	Higher production estimate	Bearish	10%	2
	Lower demand of chana dal and besan	Bearish	15%	2
	Lower Australian crop estimate	Bullish	25%	4
	Overall fundamental score			

*Bearish; 2. Marginal Bearish; 3. Consolidation; 4. Marginal Bullish; 5. Bullish

- According to the trade sources, government is planning to put import duty of 25 per cent on chana to curb import shipments and protect domestic farmers from possible price crash in the wake of higher output.
- At present, regular and higher quantity shipments of chana is coming from Australia which may have a slightly bearish impact on the domestic prices. As of 02nd December, Australian chana is being traded at Rs 4600 per quintal in Mumbai market and Rs 4650 per quintal at Mundra port. Australian chickpea of November-December delivery is being offered at Rs 4550 per quintal at Mumbai port.
- According to the latest sowing report, as on 01st December all India chana acreage is reported at 84.37 lakh hectares in 2017-18 which is 7.81 per cent higher than 2016-17 acreage of 78.26 lakh hectares at the same time period. Chana acreage has increased in 2017-18 due to increase in MSP and farmers sifting to chana crop as domestic prices was firm throughout the year.
- The central government has increased the minimum support price (MSP) of chana for the crop year 2017-18 to Rs 4400 per quintal from Rs 4000 per quintal in 2016-17.
- According to the first advance estimates released by the government, India's chana production target estimate for 2017-18 is 9.75 million MT which is slightly higher than 2016-17 fourth advance estimates of 9.33 million MT. Higher production estimate in the coming Rabi season may have slightly bearish impact on the prices.
- According to the trade sources, chana demand for dal and besan is lower than and stock of chana with stockiest is sufficient to cater the present demand. Prices are not lifting as demand is low and stock is sufficient.
- According to the latest report of Australian Bureau of Agricultural & Resource Economics & Sciences (ABARES), Australian chana production estimate has been reduced by 35.92 percent to 1.188 million tonnes from 1.854 million tonnes last year due to lower yield expectation.
- Overall score of 2.9 indicates range bound movement in the coming days.

Mandi	Price in Rs/ Quintal		
	01-12-2017	24-11-2017	%change
Delhi	4725	5125	-7.80
Bikaner	4850	5200	-6.73
kanpur	4400	4650	-5.38

Price Trend & Technicals

Estimates of higher production in the coming season coupled with regular imports have been keeping the sentiments in the chana prices dampened. Though, efforts to curb excess import supply through imposition of import duty may lend some support. In the short run we expect prices to continue to trade around the current low levels and only a positive development from the fundamental front can lift sentiments. Support is seen at Rs 4550 and sustained trading below 4800 with result in prices testing those levels. Any sharp recovery from here looks unlikely and will be limited if happens.

IMPORTANT LEVELS

S2	S1	CMP	R1	R2
4440	4550	4769	4920	5400
Outlook: Prices with trade sluggish with downward bias and move closer to Rs 4550.				

Fundamentals- Domestic & International

CHILLI

Fundamental Summary	Price Drivers	Impact	Weightage	Score (1-5)*
	Steep fall in acreage and chilli production estimate due to rock bottom prices last year	Bullish	35%	4
	Overproduction last year and high carryover stock in existing cold storages	Bearish	30%	2
	High export demand for Indian chillies; New demand from South Korea	Bullish	20%	4
	High domestic demand	Bullish	15%	4
Overall fundamental score				3.4

*Bearish; 2. Marginal Bearish; 3. Consolidation; 4. Marginal Bullish; 5. Bullish

- The prices of chilli, particularly of the Delux Teja variety have risen from the rock bottom levels bringing cheer to growers.
- The rise in prices of Teja variety chilli was mostly due to strong demand in the spot market against tight supplies from producing belts and also due to its demand in overseas.
- The team of South Korea delegates visited Asia's biggest chilli yard at Guntur on 24 November and announced starting of importing of chillies from chilli yard Guntur by South Korea.
- Increased buying by retailers and stockists amid low stocks is supporting chilli prices. Due to steep fall in production in the coming year, red Chilli prices likely to firm up. Clearer picture will emerge once the arrivals of red chillies start in December-January.
- In Madhya Pradesh, current year farmers are picking chilli at green stage and did not wait for it to get fully matured till red stage as they are receiving higher prices for green chilli than red chilli prices and bringing their crop to the Bedia mandi. Currently, 200 – 300 bags (1 bag = 35kgs) green chilli arrivals coming to the market.
- It is estimated that the export of chilli is more than four lakh tonnes during the financial year 2016-17 as against 3.47 lakh tonnes in 2015-16, according to the Spices Board's latest reports. Chilli became the most exported spice during April-June 2017 with the shipment of 1,33,000 tonnes, fetching Rs 1,198 crore.
- In Guntur and Warangal market, there is continued increasing demand reported for premium varieties like Teja, US 341, etc.
- Guntur Chilli cold storage stocks are reported higher due to higher production last year. Currently, stocks were estimated around 193,500 to 211,000 MT compared to last year's 126,000 to 145,500 MT. As per estimates, around 54,000 to 67,000 MT chilli stocks are likely to be carried forward for next year.
- Overall fundamental score of 3.4 shows bullishness in chilli prices.

Mandi	Price in Rs/ Quintal		
	01-12-2017	24-11-2017	%change
Guntur	9700	9600	1.04
Bangalore	6100	5,650.0	7.96

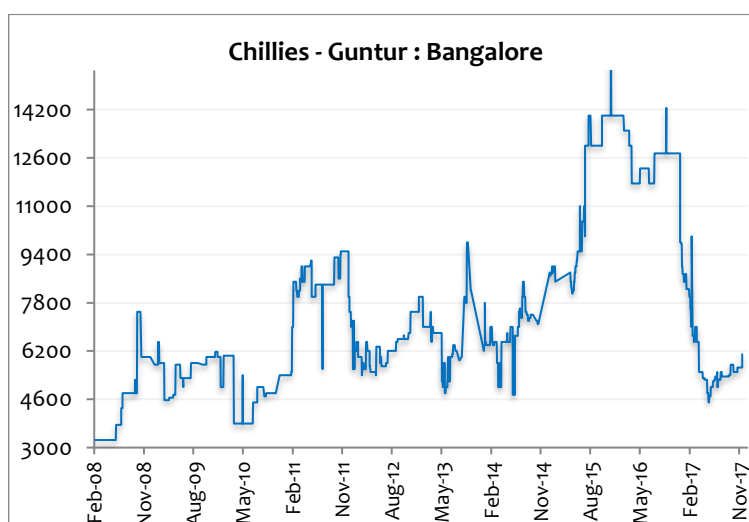

Price Trend & Technicals

With significant decline in the acreage this year the sentiments are getting a boost leading to the ongoing recovery in prices. Additionally the overseas and domestic demand is also good which is also supporting prices. Prices after hitting the lowest level since June 2014 have shown bargain hunting and with developing positivity from the fundamental front this recovery can be seen stretching further in the short run. Till the time prices are ruling above Rs 5500 in Bangalore market the recovery will expectedly continue pushing prices higher towards Rs 6500 and then towards Rs 7000. Only if Rs 5650 is breached decisively selling pressure can be seen pulling prices down towards Rs 5350.

IMPORTANT LEVELS

S2	S1	CMP	R1	R2
5350	5650	6100	6500	7000

Outlook: Prices will move higher and test Rs 6500 in the coming weeks.

Fundamentals- Domestic & International

GUAR SEED

Fundamental Summary	Price Drivers	Impact	Weightage	Score (1-5)*
	Improved domestic and export demand	Bullish	30%	4
	New crop arrival pressure	Bearish	15%	2
	Lower crop production by Gujarat	Bullish	20%	4
	Crop damage concerns in Rajasthan	Bullish	20%	3
	Profit booking at higher levels	Bearish	15%	2
	Overall fundamental score			

*1. Bearish; 2. Marginal Bearish; 3. Consolidation; 4. Marginal Bullish; 5. Bullish

- Guar seed prices in spot markets and futures have remained positive tracking improved domestic and export inquiries. However, the new crop arrival pressure and profit booking at higher levels may limit gains in the near term.
- According to Bikaner based traders, the supply of Guar crop in the spot markets since last week has shown declining trend may be due to slow farmers selling as they anticipate better returns ahead. Long term outlook is positive due to lower crop and export demand.
- Rising U.S rig count data is positive for Guar gum, which edged higher for the third straight week as it is widely used in extraction of oil and natural gas and U.S is the largest consumers of the commodity.
- As per the latest data from Agricultural and Processed Food Products Export Development Authority (APEDA), Guar gum exports from India during April-October 2017-18 increased by 44 per cent at 2.81 lakh tonnes as compared to 1.95 lakh tonnes exported last year same period. The major guar gum export destinations from the country are USA, Norway and China. According to Industry sources, India exported around 3.25 lakh tonnes of Guar gum during 2016-17 and expected to cross 4.0 lakh tonnes in 2017-18. Guar seed total availability for the 2017-18 is estimated around 17 lakh tonnes against 22-23 lakh tonnes year due to lower production.
- According to the state Agriculture Department, in Rajasthan, the area under Guar is pegged at 31.67 lakh hectares as compared to 35 lakh hectares last year while in Gujarat the acreage was down by 10 per cent to 2.0 lakh hectares as against 2.2 lakh hectares last year.
- Rajasthan state agriculture department estimated Guar seed crop of around 16.76 lakh tonnes as compared to 14.04 lakh tonnes a year ago. Despite higher acreage, reports of crop damage due to heavy rains during monsoon season in Western Rajasthan likely to limit the total harvest. Western Rajasthan like Bikaner, Barmer, Jaisalmer, and Jodhpur account for more than 80 per cent of Guar acreage in Rajasthan.
- As per the 1st Advance Estimates by Department of Agriculture Gujarat, the Guar production 2017-18 is estimated at 1.44 lakh tonnes, which is 40 per cent lower than the last year production of 2.42 lakh tonnes due to crop damage reports during monsoon season.
- Fundamental score of 3.2 indicates that Guar seed might consolidate with slightly bullish tone due to domestic and export demand.

Mandi	Price in Rs./ Quintal		
	01-12-2017	24-11-2017	%change
Bikaner (Rajasthan)	3895	3880	0.39
Barmer (Rajasthan)	3943.7	3876.4	1.74
Deesa (Gujarat)	3690	3597	2.59

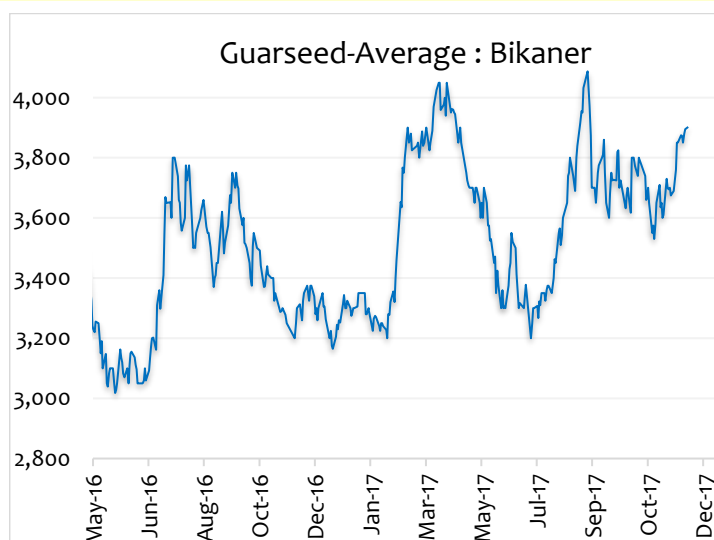

Price Trend & Technicals

Despite new crop arrivals the prices are not showing any signs, technically, of slowing down in the immediate future. Higher demand and expectation on lower production will collective keep the sentiments buoyed. We expect prices to stretch its gaining streak further in the coming weeks and move closer to Rs4080 mark, where the major resistance is seen standing. Any major correction in the commodity looks unlikely but the chances of any profit booking after such sharp recovery cannot be ruled out. However any such decline will be capped by the support of Rs 3740.

IMPORTANT LEVELS

S2	S1	CMP	R1	R2
3675	3740	3903	3950	4080

Outlook: Guar seed prices will move up to Rs 4080 where some profit booking can emerge.

% age change since 24th November 2017

b	Groundnut	8.22	3.02	2.63	0.39	14.92
c	Safflower	1.96	0.58	0.61	-0.04	-6.19
d	Sunflower	4.33	1.19	1.02	0.16	15.84
e	Sesamum	2.97	0.19	0.18	0.02	10.46
f	Linseed	2.93	2.75	2.04	0.71	35.10
g	Other Oilseeds	0.15	0.17	0.33	-0.16	-48.86
	Total Rabi Crops	623.53	389.83	395.96	-6.13	-1.55

All figures are rounded off into two digits.

Answers of NCoMM report dated 28 November 2017:

1. Tamil Nadu
2. Pink Bollworm, Maharashtra
3. All of the above

The following people gave correct answers:

Surender
Ranjit Singh
RAMDEV
Satpal
Surjeet
Gurmeet Singh
Jagseer singh
Kapil Dev verma
Mahesh Ramaswamy
Arun kumar
Som Dutt Sharma
Babloo Kumar
kulvinder singh
Ranjit Pradhan
Surya Narayan dash

Dharmveer Singh
Mayank Mishra
Riteshkumar Sahu
Dr. Raina Jain
Dr. Savitri Parashar
Dr. Ravi Pratap Singh Sangwan
Sanjay Singh
Vineet Poonia
Naresh Kumar Sharma
sandeep Kumar
SUSHIL SWAMI
Sunny Kumar
Jaipal Kumar

LUCKY WINNER :
Surender Kumar
